

PREMIUM-LINE

1/2

Luxuriously elegant profiles

- Information Sheet -

DURAL

GENERAL:

PREMIUM-LINE profiles from DURAL stands for extra special elegance and luxury. 24 carat gold plated and genuine Swarovski crystals create spectacular highlights on tiled walls. These profiles are ideal for a stunning one of a kind project. PREMIUM-LINE profiles give every room a truly individual, tasteful note.

Every profile is manufactured individually, making it unique. A careful chrome-plating process gives the high quality brass a high-gloss and extremely resistant surface. Alternatively, the profiles can be plated in 24 carat gold. All crystals are certified original Swarovski elements.

A unique manufacturing process, using a physical-chemical combination of heat and adhesives specially developed for this purpose, guarantees the secure hold of the Swarovski crystals.

INSTALLATION:

It is not possible to take every eventuality in the installation process into account. These installation instructions are provided as a recommendation only and must be adapted to the specific features of the installation site in each individual case. For this reason, PREMIUM-LINE should be installed by experienced professionals only. The generally recognized rules of good engineering practice must always be observed. For all products and materials, the following applies: The suitability of the material with regard to the expected mechanical loading and chemical exposure must be investigated carefully in each individual case. To cut the profiles to the appropriate length, we recommend that you use a manual hack saw with a fine saw blade to produce a clean profile cut.

Luxuriously elegant profiles

- Information Sheet -

Lay profiles using the thin bed procedure. To do so, embed the entire surface of the triaxial leg on the profile into the thinset mortar and make sure it is aligned horizontally. Lay the tiles and place them so that they produce a flush finish with the top edge of the profile. It is essential that the profile surface is kept as free as possible from tile adhesive. Remove any adhesive residue from the profile immediately using clean water and then wipe with a dry linen cloth, otherwise heavy irreversible staining can occur. Protect the profiles with masking tape if necessary.

To grout the surface, use only a joint grouting product that will not scratch the profile surface. Never use cement residue removers or cleaning products with a similar chemical composition and action to clean the surface.

CARE:

These profiles require no special care other than the usual care and maintenance of tiled surfaces. The profiles should be cleaned using a neutral detergent. Never use cleaning products or detergents containing acids or with abrasive ingredients, as these could scratch the profile surface. We recommend that you first test the detergent for suitability on a concealed area of the profile prior to use.

NOTE:

PREMIUM LINE profiles are only approved for wall applications in indoor areas. They are not suitable for use on floors, outdoor walls or in swimming pools. Do not expose them to continuously high levels of humidity and protect from direct contact with water.

PRODUCT DATA:

MATERIAL:	Chrome-plated brass, 24 carat gold plated brass
HEIGHT:	11 mm
LENGTH:	250 cm
STANDARDS:	Corrosion test in an artificial atmosphere and salt spray test (DIN-/UNE-EN-ISO 9227) for a test period of 200 hours passed successfully
